## Unique PMO Plus® Mixproof Valve

### Compliance

- Meets 3A/PMO Requirements Compliance - M-b 356

### Concept

This Unique **PMO Plus®** Mixproof valve is based on the well proven and exceptionally flexible design of the Unique PMO Mixproof valves from Alfa Laval. It meets the demands from the 3A/PMO (Pasteurized Milk Ordinance paragraph 15p(B)) standards saying that all movements have to be detectable, as well as the vent tube has to have the same or greater area than the connection pipe. Furthermore, the Unique **PMO Plus®** meets the FDA demands for seat lift compliance M-b 356. This allows CIP flow to clean one chamber while product is running in the other chamber, thus eliminating CIP downtime. Finally, the actuator is fail safe by spring to close.

### Working Principle

Unique **PMO Plus®** is remote-controlled by means of compressed air. The valve is a normally closed (NC) valve. The valve has two independent plug seals, forming a leakage chamber between them which is at atmospheric pressure or less during every working condition. In the rare case of fluid passing a valve seat, the fluid will enter the leakage chamber and be discharged through the leakage outlet. When the valve is open, the leakage chamber is closed.

### Build-up

This **PMO Plus®** edition of the Unique Mixproof valve is a high-end valve with regards to process security as well as from a sanitary point of view. The valve plugs are always balanced in both upper and lower valve body, securing no sensitivity to pressure spikes. The lower and upper seats are position-detectable by the ThinkTop® and a yoke-mounted, external sensor.

## Pressure drop/capacity diagrams

Fig. 2. Pressure drop/capacity diagram, upper bodies.

Fig. 4. Pressure drop/capacity diagram, lower body.

### Example to determine pressure drop at a given flow rate:

Upper body size: 2". Capacity = 80 gpm.  
 Lower body size: 2". Capacity = 80 gpm.  
 Between bodies: 2". Capacity = 60 gpm.

### Result:

From fig. 2,  $\Delta p = 0.72$  psi through upper body.

From fig. 3,  $\Delta p = 1.1$  psi between bodies.

From fig. 4,  $\Delta p = 0.52$  psi through lower body.

**Note!** For the diagrams the following applies:

Medium: Water (68°F).

Measurement: In accordance with VDI 2173.
